

## EUCJ RECENT LANDMARK CASES IN ENERGY

Dear Colleague,

As you know, the practice of the European Union's highest court, the Court of Justice (EUCJ), has far reaching implications for markets, both through the precedents it establishes and the interpretation it gives of texts. The EUCJ's cases set the tone and shape entire markets, and it is no different for the energy sector.

With this in mind, we have the pleasure of inviting you to join us **on March 30, 2021 from 13:30 to approximately 17:00 (Brussels time/CET) for a virtual Master Class on**

### **“The EUCJ's Recent Landmark Energy Cases”**

In this half day Masterclass, we will delve into the depths of, and cover everything you need to know about, two of the EUCJ's recent landmark cases in energy, namely the “Baltic Cable” case and the “Crown TenneT” case.

We will hear from renowned experts on topics including the concept of transmission system operator as it applies to interconnectors, the notion of fair remuneration of transmission lines, increased (and oftentimes misunderstood) liability obligations, and the practical implications of these judgements for the energy market and on your business, etc.

Asides from our own team and members of our network of energy experts, some of our guest speakers will include Adrien de Hautecloque (Head of Cabinet of the President of the General Court of Justice of the EU), Annika Kleine (Legal & Regulatory Director, Baltic Cable) and Professor Denis Philippe (Managing Partner, Philippe & Partners, LLP and Professor at the Catholic University of Louvain-la-Neuve).

If you want to better understand these landmark cases and know how to seize the opportunities and overcome the challenges resulting from them, make sure to register by clicking the link below:
